# Savings ROI Report

| | |
|---|---|
| **Customer** | Siemens · SI GSW CLO |
| **Period** | Oct 2025 – Sep 2026 (last 12 months, CAST API list prices) |
| **Generated** | 02 October 2026 |
| **Report Type** | Qbr |

## Key Performance Indicators

| Total Saved (12 months) | Savings Rate | Net After CAST Fee | Return per $1 of Fee |
|---|---|---|---|
| **$526,923** | **33.5%** | **$357,284** | **3.1×** |
| vs no-CAST baseline | of baseline infra cost | savings – platform fee | savings-to-fee ratio |

## ROI Breakdown

| Metric | Result |
|---|---|
| Total Actual Savings (12 months) | **$526,923** |
| Baseline Infrastructure Cost (no CAST AI) | **$1,573,732** |
| Optimized Cost After CAST AI | **$1,046,809** |
| CAST AI Platform Fee (€5 × avg prov. vCPU) | **€157,074 ≈ $169,638** |
| Net Savings (Savings – Fee) | **$357,285** |
| ROI on Platform Fee | **211%** |
| Savings-to-Fee Ratio | **3.1×** |
| Fee Payback · Net at Siemens' rates (48–58% of list) | **~11 days/mo of savings · still $83k–$136k net** |
| · ngm-helios-eks | **saved $220.8k (27.2%) · fee $91.9k · net $128.9k** |
| · ngm-integ-eks | **saved $289.2k (40.3%) · fee $73.7k · net $215.6k** |
| · ngm-kronos-eks | **saved $16.8k (38.2%) · fee $4.0k · net $12.8k** |

## Savings Driver Breakdown

| Driver | Savings ($) | Savings Rate |
|---|---|---|
| ● **Node Autoscaling** | **$526,923** | 33.50% |

## Executive Summary

Savings ROI for Siemens SI GSW CLO — ngm-helios-eks, ngm-integ-eks, ngm-kronos-eks. Over the last 12 months (Oct 2025 – Sep 2026) CAST AI downscaling removed $526,923 of node-hours at AWS list prices, a 33.5% reduction against the $1,573,732 infrastructure baseline these clusters would have cost without CAST AI. Measured against the platform fee (€5 × avg provisioned vCPU = €157,074 ≈ $169,638): net $357,285 after fee, 211% ROI, $3.1 returned per $1 of fee. Every cluster is net-positive every month — integ +$215.6k, helios +$128.9k, kronos +$12.8k — and net remains $83k–$136k even at Siemens' effective discounted rates (48–58% of list). Spot is not yet enabled ($0 spot savings today), which is the next upside beyond these numbers.

*Source: CAST AI cost-reports API (api.eu.cast.ai), org SI GSW CLO, pulled 02 Oct 2026; 12 monthly buckets Oct 2025 – Sep 2026. Savings = measured downscaling (node-hours removed) vs CAST AI baseline at AWS list prices; spot savings $0 (spot not yet enabled on these clusters). Platform fee basis: €5 × average provisioned vCPU (EUR→USD 1.08). Costs include compute + storage. Clusters: ngm-helios-eks (419c39e4-66bf-4d61-b833-4562968a61c7), ngm-integ-eks (1ad1a0bf-defe-4f51-acea-cbebb3d3fc3f), ngm-kronos-eks (6d20eb8e-a1e5-4411-b4c8-5346ac3291b0).*
